Fairholme Surgery
16 Broughton Street
SINGLETON NSW 2330

Dear Dr. Sanders,

RE: Laura FOLBIGG
DOB: 07.08.97 - 8 Millard Close, Singleton NSW 2330

It was a pleasure to review Laura today and speak with her parents. As you know Laura's sleep breathing is normal and her apnea monitor downloads have been fine. She has had no symptomatic monitor alarms in recent months. The whole monitoring process is becoming tedious for the parents but I have encouraged them to continue to monitor Laura in both daytime and night time sleep until at least her first birthday. She demonstrates no physical examination evidence of sleep disordered breathing, and her developmental milestones and weight gain have been optimal. I would welcome the chance to review her after her first birthday and if all then is optimal, we could then safely consider ceasing her apnea monitoring at that time. ↵

With kind regards,

Yours sincerely,

CHRIS SETON
